

922653. A single specimen of this small fly was swept from bare mud at dusk (c. 19.30hrs).

CALLIPHORIDAE

Cynomya mortuorum (Linne). 31.vii.82 Conyer TQ 9665. A single male of this impressive species was taken from the leaves of *Salix atrocinerea* Brot.

Addendum

Since writing the above, I have taken a single male *Leucozonia glaucia* from Berengrave Lane LNR, Rainham TQ 820670 (7.vii.83). It is interesting, but perhaps coincidental, that both my captures have been on the chalk. I have taken further specimens of *Myoleja caesio* from *Sambucus nigra*, but to date no material has been reared from the fruits of that species. *Geomyza venusta* was taken at Queen-down Warren, Hartlip TQ 828628 in May 1983.

Acknowledgements

In addition to Mr. B. R. Pitkin, I would like to acknowledge the assistance of Mr. P. J. Chandler for identifying the Mycetophilidae and Platypezidae, and Mr. J. H. Cole for identifying the *Hercostomus plagiatus* and *Chrysotus pulchellus*.
